Custom Mobile App Development services

A high performance mobile application is more than just an asset, it's a strategic investment. At QlImSoft, we deliver bespoke mobile development services engineered to help startups and enterprises build scalable, secure, and user centric mobile solutions that drive long term engagement.

Our engineering team specializes in native iOS, Android, and high performance hybrid architectures. By leveraging industry leading frameworks like Flutter and React Native, we deliver cross platform applications that provide native quality experiences from a single, maintainable codebase.

1 STICKER SMASH - INTERACTIVE PHOTO EDITOR

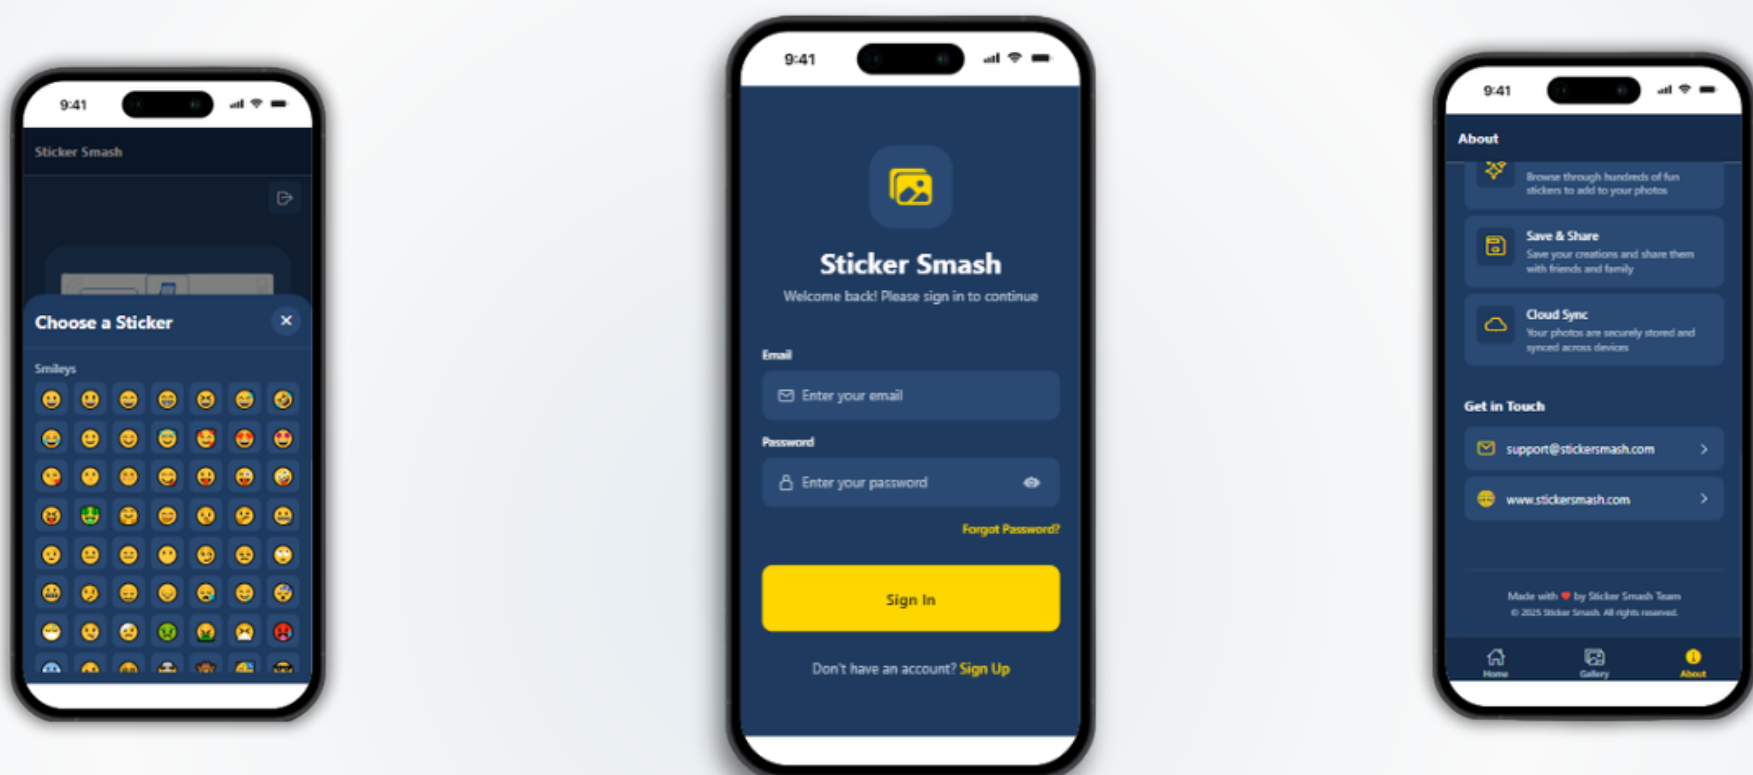

Sticker Smash is a modern mobile photo editing application that allows users to customize their pictures using interactive stickers, emojis, overlays, and creative editing tools through a simple and engaging interface.

The application is designed with a smooth user experience, responsive mobile layout, and lightweight performance to provide fast image editing, sticker placement, and easy sharing functionality for Android and iOS users.

FEATURES

- **Photo Canvas:** Effortless image uploading with real time editing previews.
- **Sticker Studio:** Interactive sticker placement and dynamic emoji overlays.
- **Tactile Manipulation:** Smooth drag, drop, and intuitive resize functionality.
- **Instant Control:** One tap canvas reset matrix and quick editing fallback states.
- **Fluid App Shell:** Clean, responsive, mobile first interface built for low latency.
- **Vector Export:** Quick file saving and instant high resolution image export loops.

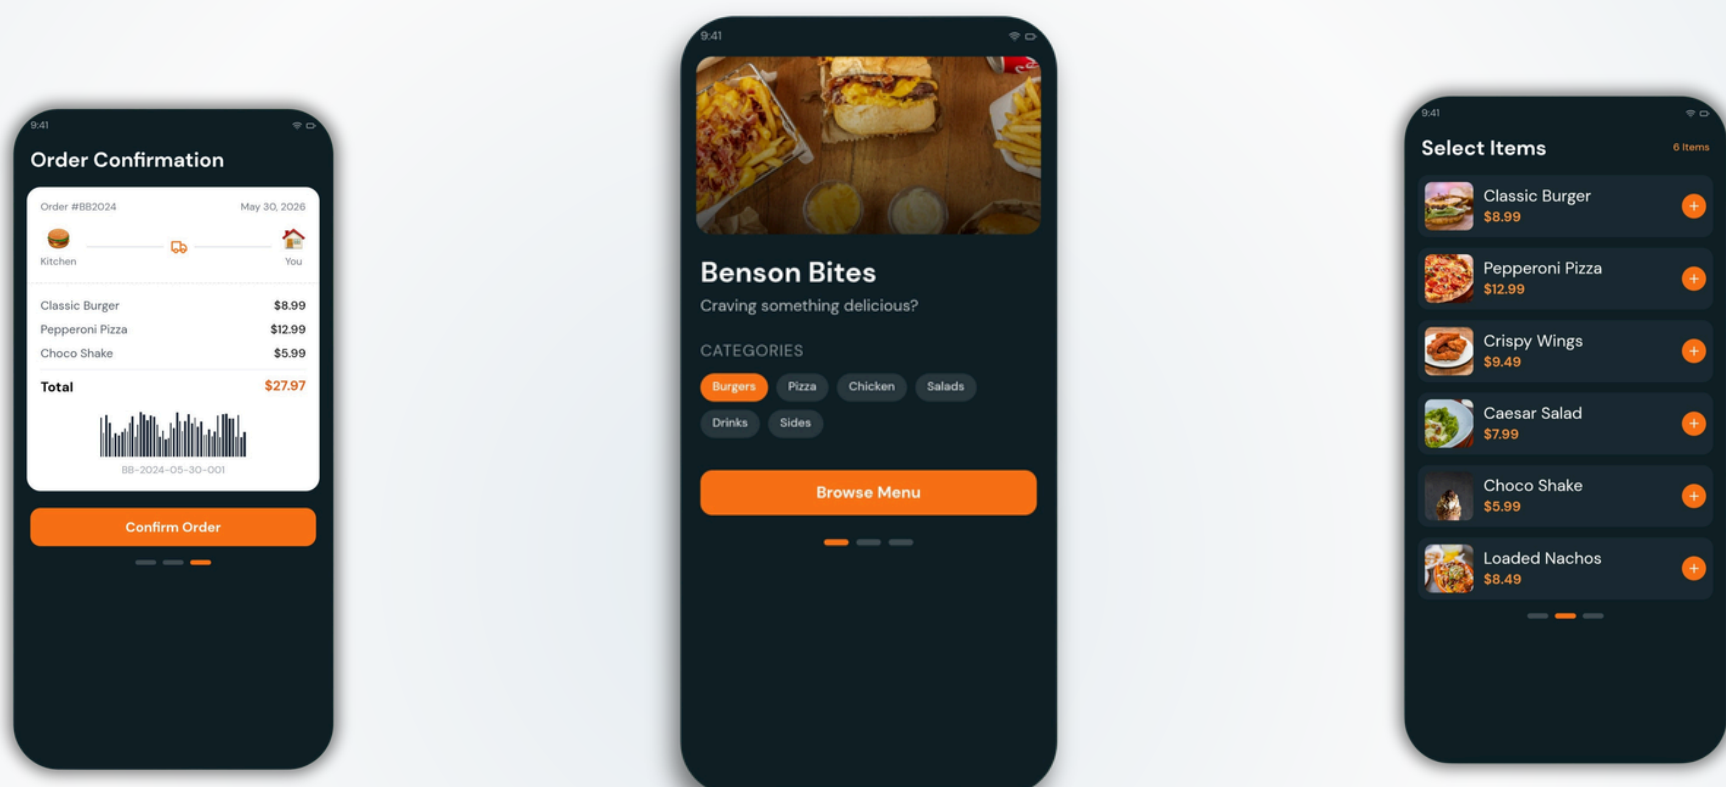

2 BENSON BITES - FOOD DELIVERY APPLICATION

Benson bites is an end-to-end mobile food ecosystem designed to redefine how users discover, customize, and order culinary treats. The application centers around an immersive, conversion driven visual architecture that leverages high resolution product showcase cards, tactile multi category micro filters, and an intuitive state driven shopping cart. Featuring an engineered dark mood matrix highlighted, the application guarantes sub secnd responsiveness across all views. From dynamic item addition algorithms to a crisp barcode integrated digital order confirmation pipeline, Benson Bites transitions smoothly between native iOS and Andriod environments, offering an elite, distraction free transactional journey.

FEATURES

- **Visual Menu:** High-res food imagery with quick action browsing.
- **Instant Filters:** One tap category switching (Burgers, Pizza, Salads).
- **Quick Cart:** Single tap item selection with real time feedback.
- **Live Billing:** Automated pricing breakdown with instant grand totals.
- **Order Tracker:** Step by step delivery timeline from Kitchen to You.
- **Digital Barcode:** Built in verification code for seamless pickup.
- **Fluid UI:** Responsive mobile layout optimized for iOS and Android.

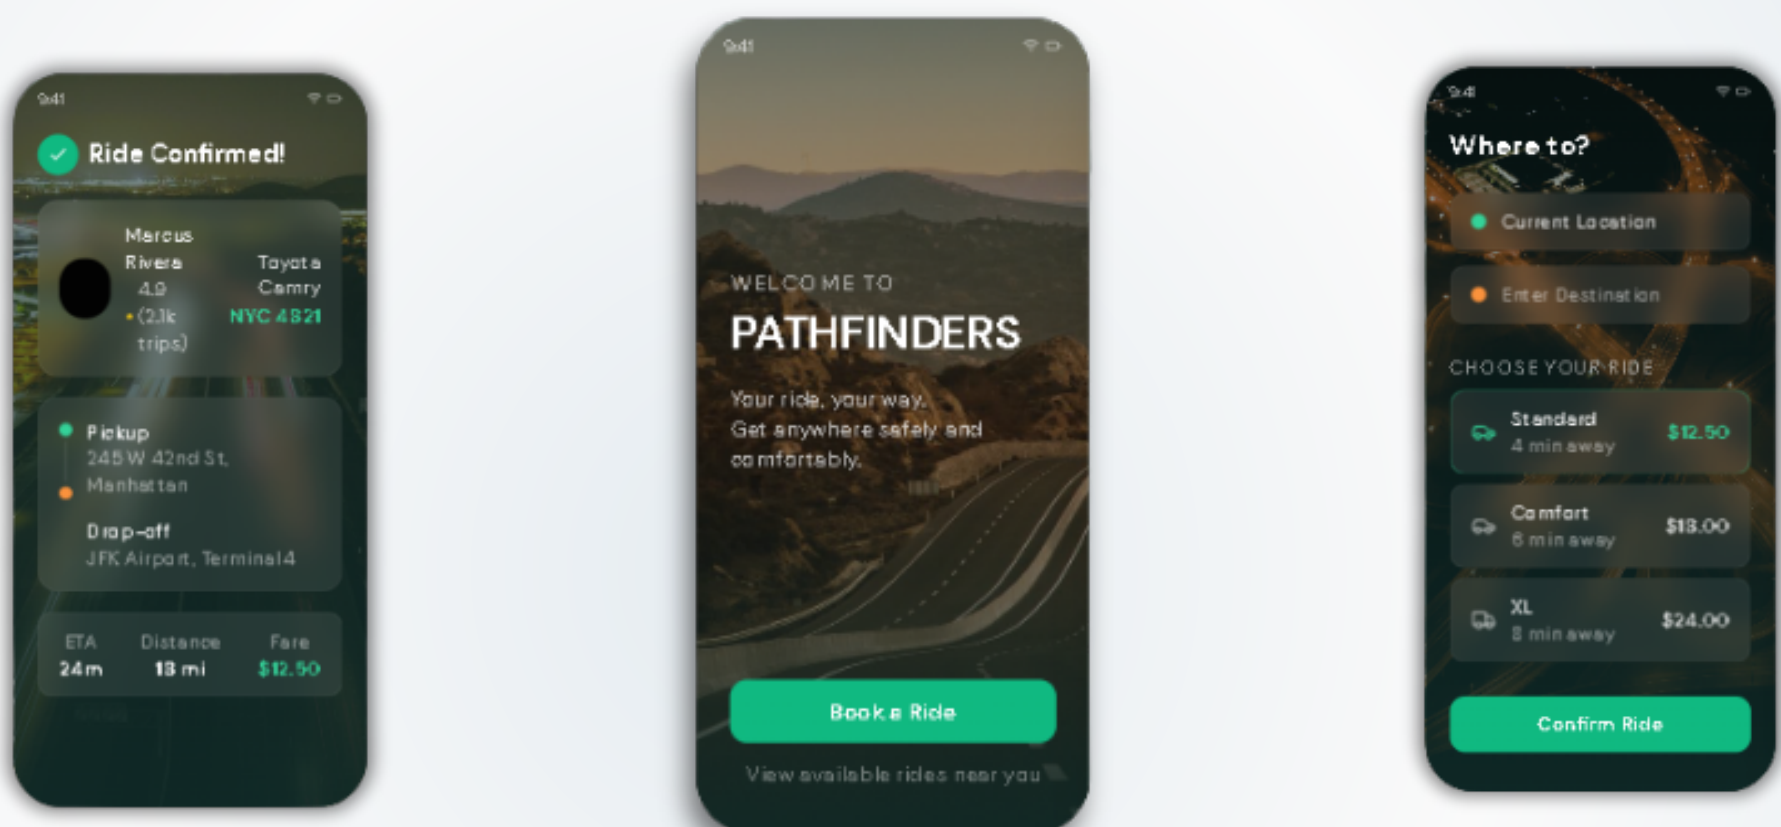

3 PATHFINDER - RIDE BOOKING APPLICATION

Pathfinders is a premium mobile ride booking ecosystem engineered to optimize urban transit. The application centers around a high contrast dark theme that utilizes atmospheric background gradients, structured glassmorphic input cards, and high visibility typography. Featuring seamless multi tier vehicle selection widgets and integrated spatial transit data slots, Pathfinders streamlines user navigation from initial destination entry to final ride execution. It guarantees immediate visual feedback, sub second view transitions, and an elegant transactional layout designed for both iOS and Android viewports.

FEATURES

- **Smart Route Inputs:** Sleek location cards for seamless pickup and destination mapping.
- **Multi Tier Fleet Matrix:** Instant comparison rows for ride categories with dynamic pricing.
- **Live Booking Confirmed:** Real time driver profile matching with vehicle tags, ratings, and active ETA tracking.
- **Tactile Metric Slots:** At a glance layout displaying estimated time, distance, and final automated fares.
- **Fluid UI Framework:** Premium glassmorphic interface optimized natively for iOS and Android displays.

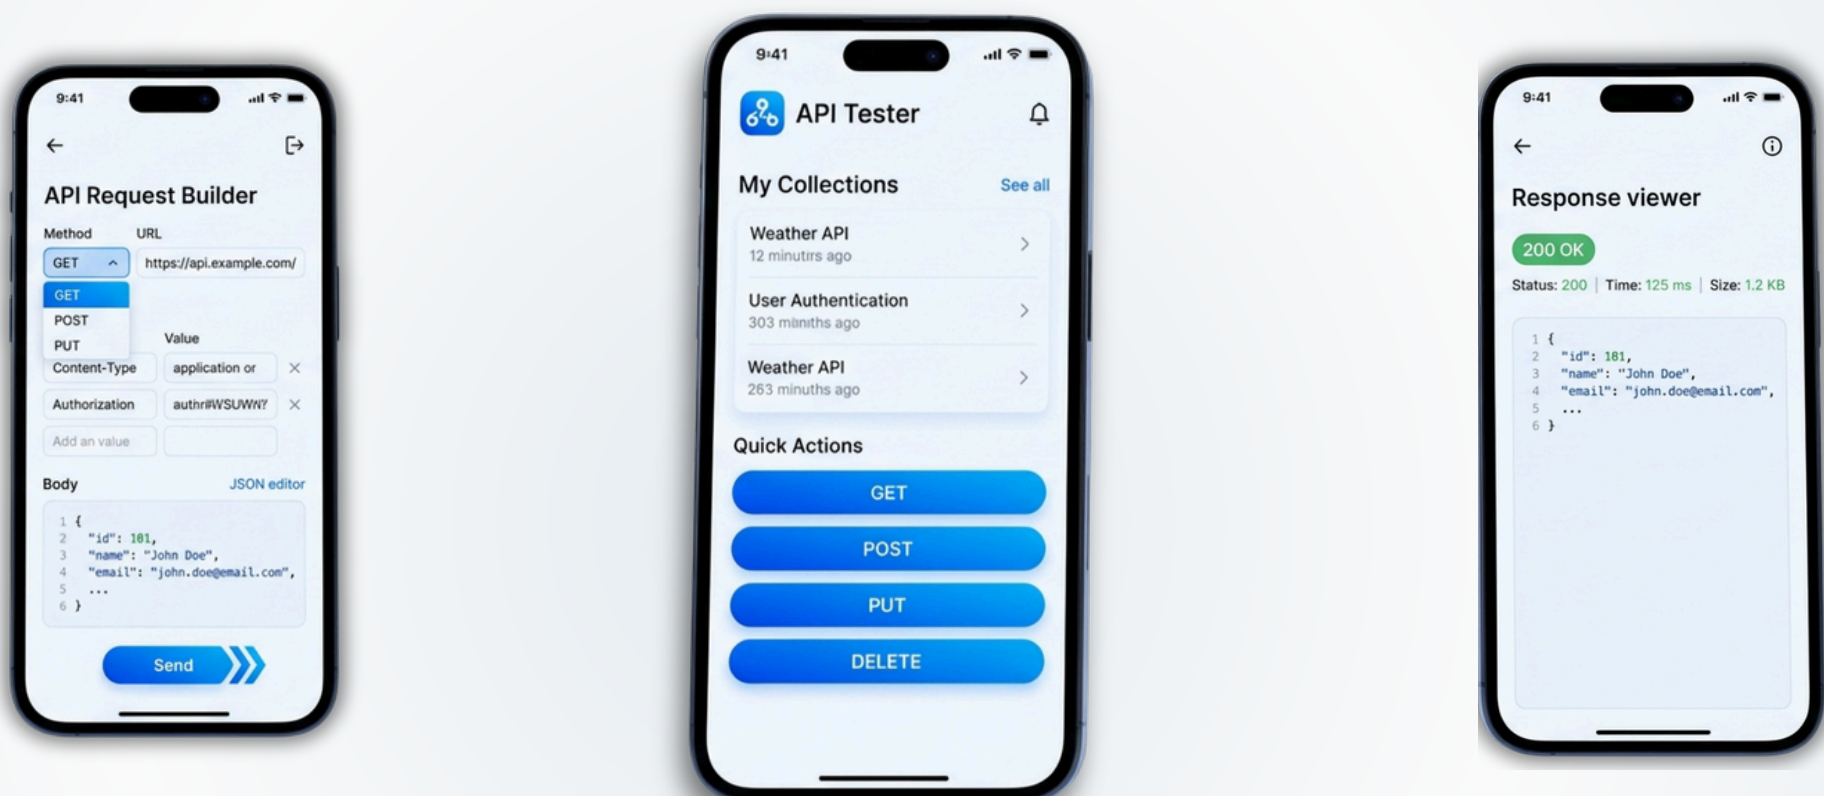

4 API TESTER APPLICATION

API Tester is a high performance developer utility mobile application designed to streamline API testing and debugging on the go. Built with a clean, light mode Alabaster interface, the application offers an intuitive workspace for developers to construct requests, manage endpoint collections, and analyze server responses effortlessly. Featuring structured forms for methods, headers, and body payloads alongside an embedded JSON editor, API Tester eliminates the need for bulky desktop clients, delivering an elite, mobile first ecosystem for efficient backend verification on both iOS and Android.

FEATURES

- **Request Builder:** Advanced configuration console to easily customize HTTP methods (GET, POST, PUT, DELETE), headers, and authorization keys.
- **Smart Collections:** Dedicated dashboard to organize, save, and categorize frequently used endpoint groups for instant access.
- **Quick Actions:** One tap execution buttons to initiate rapid baseline requests directly from the home screen.
- **Inline JSON Editor:** Code friendly editing canvas with structural formatting rules to safely write complex body payloads.
- **Fluid Developer UI:** Sleek, high contrast interface designed to render data heavy metrics cleanly on all mobile screens.

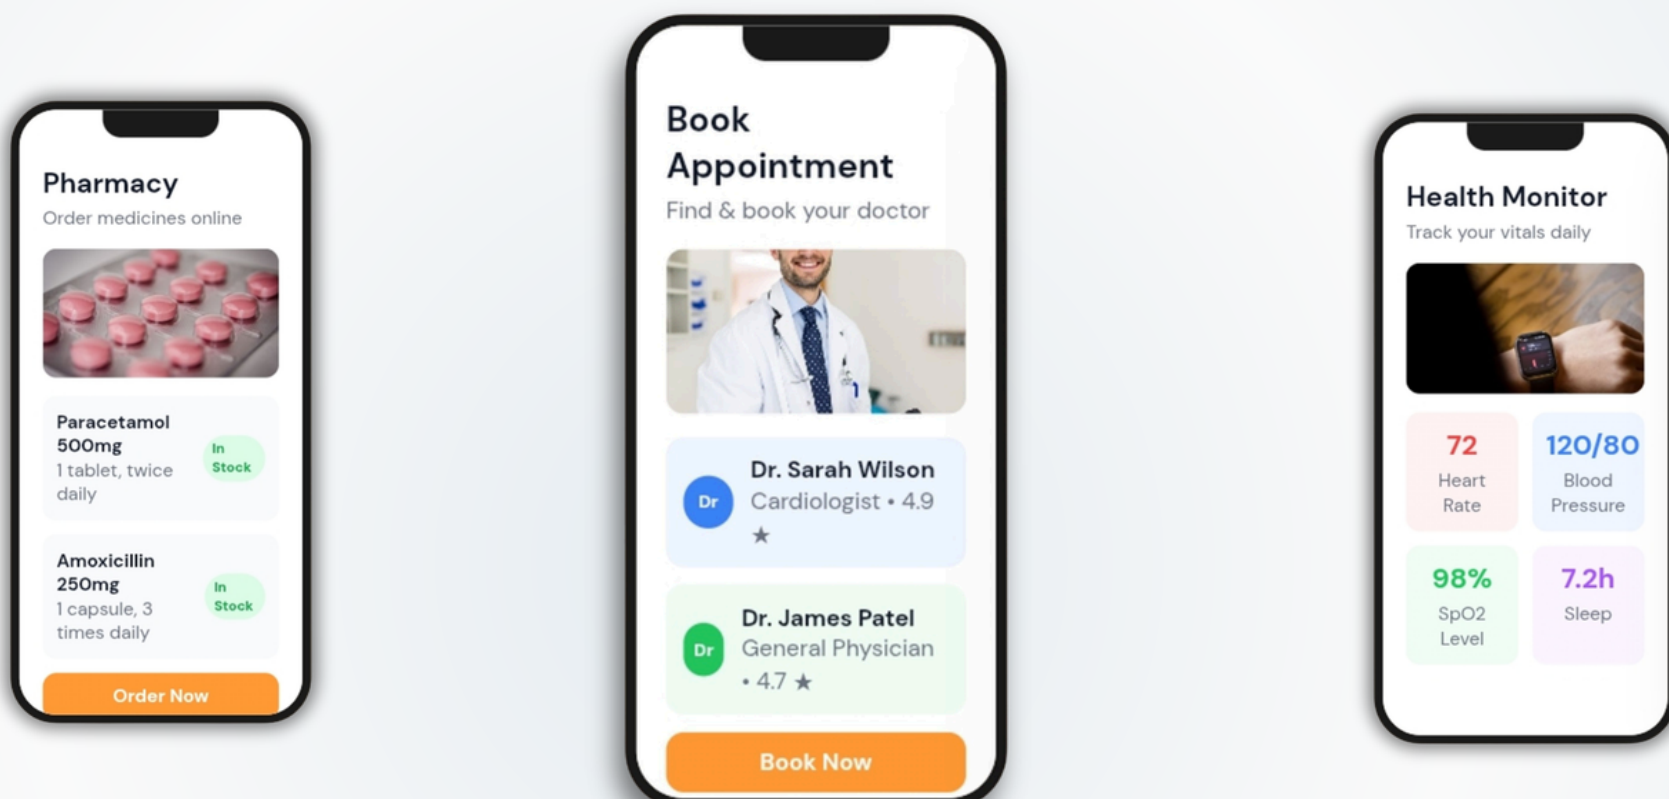

5 HEALTH CARE / WELLNESS APPLICATION

CarePulse is an all in one mobile healthcare ecosystem engineered to bridge the gap between patients, medical professionals, and daily wellness tracking. Designed with a clean, high accessibility light interface and calming pastel accents, the application provides a seamless transition between three vital healthcare pillars: instant doctor appointment scheduling, online pharmacy ordering with live stock verification, and real time vital sign monitoring. CarePulse streamlines complex medical workflows into a unified, user friendly mobile experience optimized for both iOS and Android viewports.

FEATURES

- **Smart Doctor Booking:** Intuitive practitioner cards with integrated ratings, specialties, and one tap "Book Now" pipelines.
- **Digital Pharmacy:** Structured medicine catalog with prescription dosage insights, clear imaging, and real time "In Stock" indicators.
- **Vital Health Monitor:** High visibility dashboard that tracks daily vitals including Heart Rate, Blood Pressure, and sleep cycles.
- **Unified Workspace:** Segmented layout architecture that lets users jump from clinical consultations to lifestyle monitoring effortlessly.

BUILD A HIGH PERFORMANCE MOBILE APP TAILORED TO YOUR BUSINESS GOALS

Get a modern, scalable, and results driven Android & iOS application built with industry standard technologies.
